Gizmo: Balancing Chemical Equations

Interpreting chemical formulas Introduction:
To balance a chemical equation, you first need to be able to count how many atoms of each element are on each side of the equation.

students first exposure to balancing chemical equations. In this activity they are asked to add coefficients to the reactants and products, as they change coefficients they will see the number of atoms change. This will allow them to actually count the atoms on both the reactant and product sides and compare the number of atoms.

Equations Gizmo **Balancing Chem Equa tions SE.docx - Weebly**

The chemical equation has the products on the right side, while the reactants are written on the left side. Both of them are separated by an arrow. For instance, $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$ denotes that there are four atoms of hydrogen and 2 atoms of oxygen on both sides of the
