Philips Lighting tutorial modern lighting color temperature

The colour change is managed via a switch on the front of the unit behind the magnetic bezel, allowing the colour temperature to be changed between 3000K, 4000K & 6000K. Not only does this make it easier to change colour temperatures once the unit has been installed, it is also an effective space saver when stocking a large number of the downlights, as opposed to having downlights in each ...

The Fluorescent Lamp - Choice of Colours

The only option was extra warm white 2700K to 2800K. Colour temperatures are measured in Kelvin and is symbolized by the letter K. The higher the Kelvin rating, the whiter and then bluer the light appears. Contrary to popular belief a higher colour temperature is not a measurement of brightness but appearance, brightness is measured in lumens.
