MAUVE (magnitude, answer, units, variables, and equations) is a framework and rubric to help students and teachers through the process of clearly solving and assessing solutions to introductory physics problems. Success in introductory physics often derives from an understanding of units, a command over dimensional analysis, and good bookkeeping. I developed MAUVE for an introductory-level ...

2. Problem-solving as a group. Have your students create and decorate a medium-sized box with a slot in the top. Label the box "The Problem-Solving Box." Invite students to anonymously write down and submit any problem or issue they might be having at school or at home, ones that they can't seem to figure out on their own.

Teach problem-solving skills in the context in which they will be used (e.g., mole fraction calculations in a chemistry course). Use real-life problems in explanations, examples, and exams. Do not teach problem solving as an independent, abstract skill. Help students understand the problem.

Problem solving games aren't for just any team. Participants must have an open-mind and accept all ideas and solutions. They must also have an Agile mindset and be open to different structures, planning, and processes. Problems usually arise when we least expect them, so there's no better way to prepare than embrace agility and flexibility.

Critical thinking and problem solving are considered key skills for this uncertain future, especially considering how remote work seems to become more and more popular as the years go by. In the future, workers will be likely selected based on their ability to be independent from micro-managing and able to work with less supervision and even away from the office.
