The AllPrep DNA/RNA FFPE Kit is specially designed for simultaneous purification of genomic DNA and total RNA from FFPE tissue sections. Pure DNA and RNA are obtained from the entire sample, in contrast to other procedures where the biological sample is divided into two before being processed separately.

The actual analysis of RNA-seq data has as many variations as there are applications of the technology. In this section, we address all of the major analysis steps for a typical RNA-seq experiment, which involve quality control, read alignment with and without a reference genome, obtaining metrics for gene and transcript
