~~What is System Programming?—Definition from Techopedia~~

A system programming language is a programming language used for system programming; such languages are designed for writing system software, which usually requires different development approaches when compared with application software. Edsger Dijkstra refers to these language as Machine Oriented High Order Languages, or mohol.

~~Solution Manual for System Programming with C and Unix ...~~

Low level systems programming with C++. Ask Question Asked 9 years ago. Active 9 years ago. Viewed 17k times 4. 5. I have been using C++ for a while now and I began to get interested in lower level system programming like drivers and stuff. Even some kind of primitive operating system could be very interesting project!
