R231 is a chassis code for the current generation of the Mercedes-Benz SL-Class roadster, replacing the R230. The car was released in March 2012 and uses Mercedes-Benz's new 4.7 litre twin turbo V8 engine with a power output of 435 PS (320 kW; 429 hp). AMG version of the roadster will follow. The new SL is 140 kg (309 lb) lighter than the previous, being made almost entirely out of aluminium.

Most people choose one of the CDI diesels, with the E200 CDI and E220 CDI the most frugal while the E320 CDI is a wonderfully strong V6 engine. Where the E-Class isn't as impressive is in corners, where the artificial steering and lack of body control in bends (compared to alternatives like the BMW) mean it's not as involving to drive.

To complete the electrical circuit, the entire chassis serves as the return path to the battery, and is connected to the negative battery terminal by a short length of thick ground wire in the engine compartment. Each power supply wire is controlled by a switch and a fuse. The fuse is designed to carry no more than the normal current on that ...

The main battery in W211 models is located in the center of the trunk, mounted in a well, below the trunk carpet. The auxiliary battery is located in the right side of the engine compartment, near the HVAC intake. When replacing your battery, be sure to use a high quality unit. Replacing the battery can be done in a short amount of time.
